

# BC PLUS 4000

BC Plus 4000 is the new smart battery charger designed for the maintenance of all 24V batteries, with microprocessor and Liquid Crystal Display. With the introduction of this model in BC range of chargers, the innovative 8-steps charging algorithm developed by BC Battery Controller is now available also for all vans, boats and trucks batteries. BC Plus 4000 is ideal for the recovery, charge, desulfation, maintenance and analysis of all 24V batteries and it can be left always connected to the battery, with no risk and no need to disconnect

the battery from the vehicle, keeping it fully charged during long periods of inactivity (even months). The charger delivers a maximum current of 4 Amps and runs a fully automatic 8-cycles charging algorithm, providing a complete solution to recover deeply discharged batteries (from 3 volts) and to recharge, desulfate and maintain all 24V batteries (traditional, gel, sealed...) from 15 to 80 Ah (up to 150 Ah for maintenance). The display shows the charging cycle executed, any functioning error as well

as the battery state of charge (digital voltmeter) in real time. BC Plus 4000 does not produce sparks and it is protected against short circuit, reverse polarity, overcharging and overheating. The package includes a waterproof battery cable with eyelets (code STD2V), which can be left always installed on the vehicle, and a battery cable with insulated clamps (code 30AMPZ). The warranty is extended to 3 years.

## BC PLUS 4000

220÷240 Vac, 50÷60 Hz  
27.6 V / 28.8 V - nominal 24 V  
4.0 A max  
8 cycles, automatic (Initialization, Recovery, Soft Charge, Bulk Charge, desulfation, Battery Analysis, Maintenance and Equalization)  
24 V Lead Acid  
(Traditional, Gel, MF, VRLA, AGM, Ca/ca, etc.)  
From 15 Ah to 80 Ah (Charge),  
up to 150 Ah (Maintenance)  
from -20° to +50°C  
Weatherproof - Protection against water splash IP44. Suitable for outdoor use

Featuring wall mounting system with fast dismounting

## 8 CYCLES CHARGING TECHNOLOGY

---

**BC PLUS 4000** is a digital 24V battery charger and maintainer managed by a **latest-generation microprocessor**, which is in charge of monitoring the battery parameters in real time and to execute a **new multi-cycle charging algorithm**:

1. **Initialization**: the device checks if one or more cells are shorted, in order to verify that the battery is in a proper condition to be recharged/recovered.
2. **Recovery**: if the battery is deep discharged (battery voltage starting from 1.5 V), the device tries to recover it, taking it back to a higher voltage.
3. **Soft Charge**: if the battery is in a condition of significant undercharge, the device provides a light pulsing current to the battery, to overcome this critical phase.
4. **Bulk Charge**: the device provides full current to the battery, recovering about 85-90% of the battery capacity.
5. **Desulfation / Absorption**: the device provides a "controlled overcharge" to recover the remaining 10-15% of the battery capacity, through the desulfation/recovery the lead-acid cells (for low or medium sulfation).
6. **Battery Analysis - End Cycle Test**: the device stops providing current to the battery for a short time, in order to verify whether the battery is able to retain the charge received. This test is periodically repeated during the Maintenance.
7. **Maintenance**: the device keeps the battery in the best charge conditions for very long periods (even months) during which your vehicle is left unused, without any possible drawback (battery overcharge, battery overheating, water and/or electrolyte loss, etc).
8. **Equalization**: every 30 days during long term maintenance, the device executes an equalization charge in order to balance the battery lead-acid cells, avoiding electrolyte stratification within the cells.

## SAFETY AND PROTECTIONS

---

**BC PLUS 4000** features a series of **8 protections and active guard mechanisms** that make it easy to install and to use, without any risks even for users without expertise:

- **No interferences the vehicle's on board electronics** (control unit, ABS, GPS...)
- Protection from output lines short circuit, even for an indefinite time: **no sparks!**
- Protection from battery polarity inversion
- Protection from battery overcharge/overheating
- Thermal protection from overtemperature
- No need to disconnect the battery from your vehicle
- Very few gas development during the charge: no need to remove the battery plugs

Laboratory Tests ensure the manufacturing of products in conformity to the regulations in force on safety and electro-magnetic compatibility. Norms and Regulations: EN55014-1, EN55014-2, EN60335-1, EN60335-2-29, EN61000-3-2, EN61000-3-3.

## BATTERY TYPES AND CAPACITY

---

**BC PLUS 4000** is specifically designed for charging and maintaining **all 24V lead-acid batteries** currently available on the market (traditional, VRLA, MF, AGM, GEL, Ca/Ca, etc). **BC PLUS 4000** is addressed to recharge batteries with a capacity **from 15 to 80 Ah (up to 150 Ah for Maintenance only)**.

## EQUIPMENT & ADD-ONS

---

The package includes:

- the battery charger and maintainer **BC PLUS 4000** for long term battery maintenance, provided with a 220V power cable (2 meters long) and a battery output cable;
- **STD2V** waterproof battery cable with eyelets, which can be left always installed on board;
- **30AMPZ** battery cable with clamps;
- a copy of the User Manual.
